The country's leading manufacturer of central heating boilers

AZTEC Classic

The electric central heating boiler range from Trianco

Trianco have a pedigree in the manufacture of today's sophisticated oil fired, gas fired and solid fuel boilers for the domestic market - a natural extension of pioneering range cooker development in the early nineteenth century. It was a logical step therefore to combine this expertise with the application of modern technology to launch the Trianco Aztec electric boiler range.

The Aztec Classic and Aztec Gold electric boilers are wall mounted central heating systems designed with practicality in mind - suitable for just about any application in any type of property. Fitted vertically and only requiring front access for servicing, the aztec classic is compact in size from 143mm deep x 165mm wide to between 550mm and 1080mm high, meaning they can be installed in the smallest of spaces. Once switched on, the Aztec is fully controlled by a solid state management system which automatically monitors its safety and running functions. Designed to work on a fully pumped wet system, these boilers produce hot water by passing cold water over long life replaceable elements housed in an insulated stainless steel heat exchanger.

If you need to heat a house, flat, mobile home or apartment efficiently and effectively, the Aztec Classic has it all.

Model shown is the
Aztec Classic

The Aztec Classic

Trianco have a pedigree in the manufacture of world-leading central heating boilers. The Aztec Classic is no exception.

- British Gas Service listed
- Kite Marked
- Can be installed almost anywhere
- Outputs up to 12kW
- No flue or fuel supply tank required
- No noxious gases
- Easy to install
- Virtually maintenance free
- 99.8% efficient
- Replaceable elements
- Self diagnostic checking
- Soft switching to preserve element life and prevent interference
- Resettable thermal safety cut-out
- Compatible with solar power

Flats

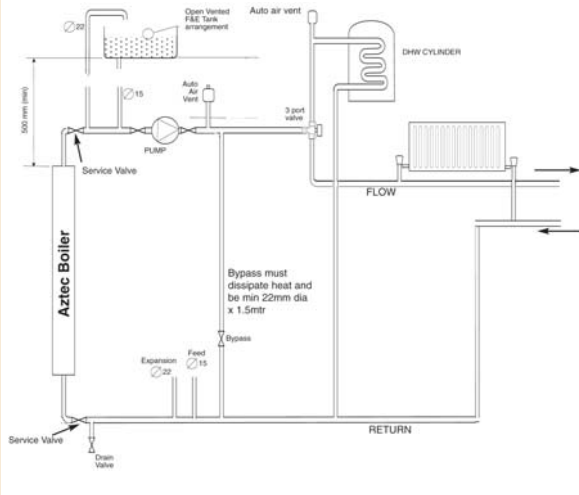

Typical Applications

For a truly compact solution to heating needs when space is at a premium, the Aztec Classic is the answer. The boiler doesn't need a flue or fuel supply tank and is very quiet in operation, which makes it ideal for uses such as loft and home extensions, flats and apartments. It's versatility is demonstrated by the way several boilers can be linked together to give greater output for supplying heat to your family home, subject to incoming power

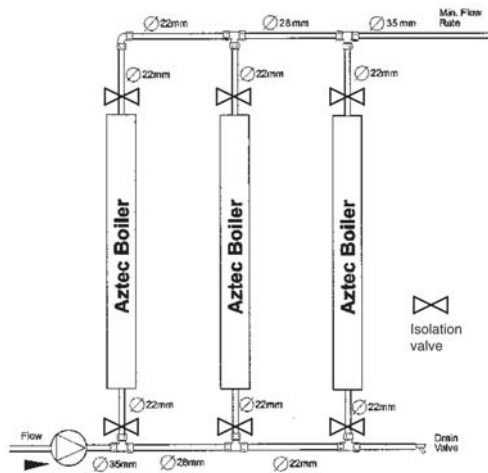

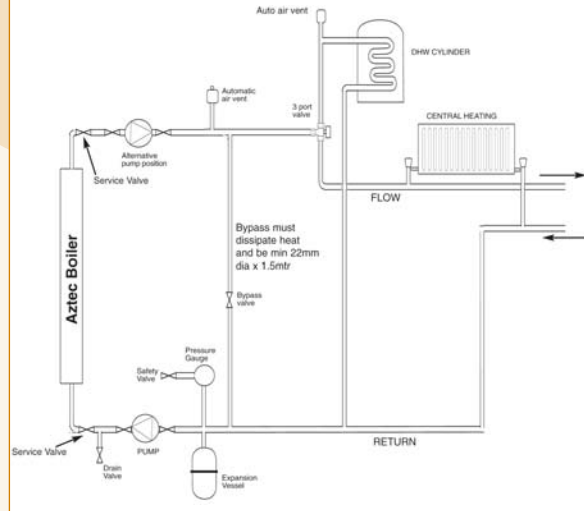

supply you could achieve 72kW of heat (245,664 btu's) by linking six 12kW boilers. From underfloor heating to conventional radiators, thousands of people across the UK have already realised that Aztec is the best option when gas or oil are not available and is the sensible choice over a storage heating system.

Applications and Specifications

OPEN VENT SYSTEM

SEALED SYSTEM

For larger properties the boilers can be linked in any combination to provide greater heating capacity. For example by linking 2 x 11kW boilers to produce 22kW of heat, or 6 x 12kW to produce 72kW of heat.

MODEL	OUTPUT kW	L mm	D mm	W mm	WEIGHT Kg	WATER CONTENT Ltr	GAS COUNCIL Nos
AZTEC-2	2	550	143	165	7.0	1.0	EB 897 01
AZTEC-6	6	825	143	165	8.1	2.1	EB 897 02
AZTEC-9	9	1080	143	165	10.6	3.2	EB 897 03
AZTEC-11	11	1080	143	165	10.8	3.2	EB 897 04
AZTEC-12	12	1080	143	165	10.8	3.2	EB 897 05

Please note: 1 kW = 3,412 Btus

Designed to take the cold out of conservatories

How does it work?

The Aztec Gold 2 kW electric system boiler is ideal for providing a completely separate heating system in conservatories. It is a simple all-in-one solution - an electric system boiler complete with everything you need to heat a small area.

The Trianco Aztec Gold Customer satisfaction in a box

Available in a choice of white or bronze casing, the Aztec Gold has self-diagnostic checking to ensure it is working efficiently and effectively, and a re-settable thermal cut-out amongst its safety features. Complete with all the components you would expect of a system boiler, the Aztec Gold 2kW is capable of providing 6,824 btu's of heat output, which is sufficient to heat a conservatory of approximately 20m² (subject to usual heat loss calculations).

With no flue required and minimal maintenance needed, the Aztec Gold really is a simple solution to providing that extra heat.

- No complicated alterations to an existing heating system
- All system boiler components provided in a compact casing
- Self diagnostic checking
- Re-settable thermal safety cut-out
- No flue required
- Virtually maintenance free
- Compatible with radiators and underfloor heating packs

The Eight Step guide to Heating Simplicity

- Step 1** Buy the Aztec Gold from your builders/plumbers merchant or DIY retailer
- Step 2** Secure to wall
- Step 3** Pipe up radiators or under-floor pack
- Step 4** Wire in programmer
- Step 5** Fill with water
- Step 6** Connect to mains electric
- Step 7** Switch on...
- Step 8** ...and you will soon have a genuine hot house

Easy to install
'Just add water' ...and the rads

Ideal for extensions and single occupancy dwellings

Providing a higher output, the Aztec Gold 4kW gives the additional heat required to provide a perfect solution for use in single occupancy dwellings, mobile homes, bedsits or holiday flats.

How does it work?

The Aztec Gold needs to be hardwired into a 20 amp circuit protected by an RCD. The boiler comes complete with all the components you

would expect of a system boiler and, as a self-contained unit, the only other connections are the flow and return central heating pipes into the system.

Models come with soft switching to preserve element life and prevent electrical interference, pressure relief valve and 2 litre expansion vessel. Virtually maintenance free, they require no flue, produce no noxious gases and are compatible with underfloor heating or radiators.

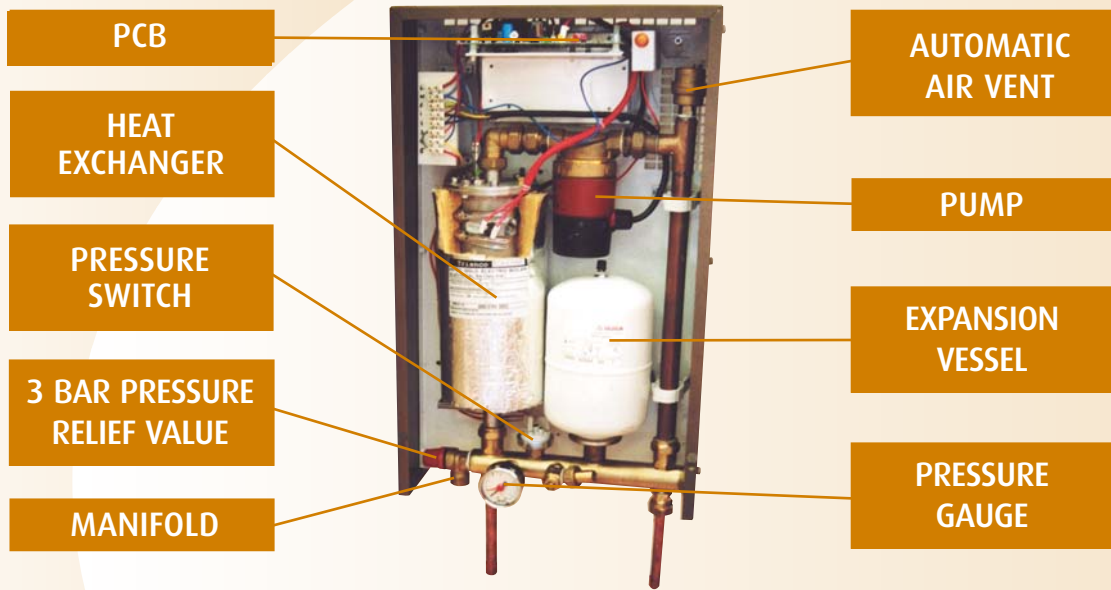

- Available in white or bronzed stove enamel casing
- Thermistor temperature sensing
- Stainless steel insulated heat exchanger
- Incoloy element
- Automatic air vent
- 3 bar safety blow off valve
- 2 litre expansion vessel
- Thermostatic temperature range from 30°C to 70°C
