

DESCRIPTION

Until now, two different products were needed for the daily cleaning and maintenance of acrylic surfaces and for removing scratches and wear and tear. Acryl-Star cleaning and polishing compound's advanced composition satisfies both demands.

Cleaning and care: The Cramer Acryl-Star removes lime scale, discolouration and tough deposits without scratching. The cleaning technique is based on a combination of the right detergent with a special polishing compound. Existing minor scratches are removed.

Scratches and wear and tear: Use undiluted with a soft cloth to achieve a high gloss finish.

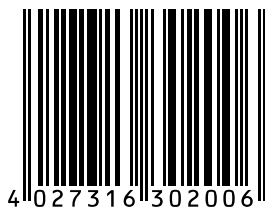

INSTRUCTION

Instructions for daily, sensitive cleaning: Apply the paste with a soft and moist cloth or sponge, rub in and then rinse off with warm water.

Polishing / pre-treatment: Light scratches can be removed with the Acryl-Star only. Deeper ones must be sanded with the sandpaper included, before polishing. At first use the 800 Grade (the more abrasive one) wet/dry sandpaper in straight directions (not circles) with water. After removing the existing scratches, clean the area. Now, use the 1200 Grade wet/dry sandpaper with water. For this, change the direction about 90° and sand the area well to give it a smooth, matt surface. For perfect results it is important to do this accurately.

Polishing: Apply the paste on a soft cotton cloth and polish the area under light pressure in circular direction to give a perfect finish.

648/2004/EC, contains: Less than 5% anionic surfactants, non-ionic surfactants, soap. Further ingredients: polishing powder, odorous substance, preservatives BENZOISOTHIAZOLINONE
