

Aqueous Logic

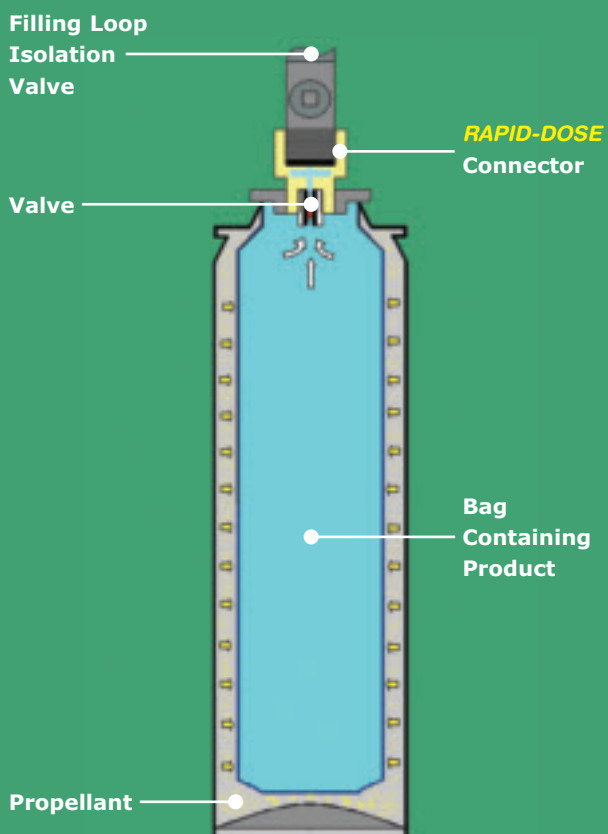

RAPID-DOSE (patents pending)

The easy way to dose sealed heating systems

- No need to draw off water, release system pressure or wait for system to cool
- Doses directly to heating system using the purpose designed connector
- Discharges in around 30 seconds
- Advanced formulations
- No mess

Aqueous Logic is revolutionising water treatment with a new dosing system designed to make water treatment easier and less expensive. **RAPID-DOSE** is a disposable pressurised canister, pre-filled with inhibitor (or cleaner), that can be used to dose a sealed system within a matter of minutes. There's no need to release system pressure or draw off water. Simply connect the canister to the filling loop isolation valve (or a radiator), using the purpose designed **RAPID-DOSE** connector, and the canister will discharge itself.

How does **RAPID-DOSE** work?

RAPID-DOSE works by holding the product (inhibitor or cleaner) in a bag inside the canister. This separates the product from the propellant and means that although the product is squeezed out of the bag by the pressure, the propellant never leaves the canister. As the pressure in the canister is greater than system pressure, the canister rapidly discharges into the heating system.

Central Heating Protector and Pre-commissioning Cleaner are available in the **RAPID-DOSE** format.

De-sludging and De-scaling cleaners will be available soon.
