ENVIRONMENT CONCERNS

Recycle the materials with the symbol . Put the packaging in applicable containers to recycle it. Help protect the environment and human health and to recycle waste of electrical and electronic appliances. Do not dispose appliances marked with the symbol  with the household waste. Return the product to your local recycling facility or contact your municipal office department for household waste or the shop where you purchased this product.

CUSTOMER CARE AND SERVICE

We recommend the use of original spare parts.

When contacting Service, ensure that you have the following data available.

The information can be found on the rating plate. Model, PNC, Serial Number.

 **Warning / Caution-Safety information.**

Subject to change without notice.

SAFETY INFORMATION

Before any cleaning or maintenance operation, disconnect hood from the mains by removing the plug or disconnecting the mains electrical supply. Always wear work gloves for all installation and maintenance operations. This appliance can be used by children aged from 8 years and above and persons with reduced physical, sensory or mental capabilities or lack of experience and knowledge if they have been given supervision or instruction concerning use of the appliance in a safe way and understand the hazards involved. Children shall not be allowed to tamper with the controls or play with the appliance. Cleaning and user maintenance shall not be made by children without supervision. The premises where the appliance is installed must be sufficiently ventilated, when the kitchen hood is used together with other gas combustion devices or other fuels. The hood must be regularly cleaned on both the inside and outside (AT LEAST ONCE A MONTH). This must be completed in accordance with

the maintenance instructions provided in this manual. Failure to follow the instructions provided in this user guide regarding the cleaning of the hood and filters will lead to the risk of fires. The flaming of foods beneath the hood itself is severely prohibited.

The use of exposed flames is detrimental to the filters and may cause a fire risk, and must therefore be avoided in all circumstances.

Any frying must be done with care in order to make sure that the oil does not overheat and ignite.

 **CAUTION:** Accessible parts of the hood may become hot when used with cooking appliances.

For lamp replacement use only lamp type indicated in the Maintenance/ Replacing lamps section of this manual.

 **WARNING!** Do not connect the appliance to the mains until the installation is fully complete.

When connecting the hood to the electrical network, only certified electrical adaptors are allowed and not power strips.

1.SAFETY INSTRUCTIONS

With regards to the technical and safety measures to be adopted for fume discharging it is important to closely follow the regulations provided by the local authorities.

The ducting system for this appliance must not be connected to any existing ventilation system which is being used for any other purpose such as discharging exhaust fumes from appliances burning gas or other fuels. Do not use or leave the hood without the lamp correctly mounted due to the possible risk of electric shocks.

Never use the hood without effectively mounted grids.

The hood must NEVER be used as a support surface unless specifically indicated.

Use only the fixing screws supplied with the product for installation or, if not supplied, purchase the correct screws type.

Use the correct length for the screws which are identified in the Installation Guide.

In case of doubt, consult an authorised service assistance centre or similar qualified person.

 **Warning!** Failure to install the screws or fixing device in accordance with these instructions may result in electrical hazards.

2.USE

The hood serves to aspirate the fumes and vapors resulting from cooking.

The attached installation manual indicates the version to be used depending on the model you have, the suction version with

external evacuation  or filtering with internal recirculation .

3.INSTALLATION

The mains power supply must correspond to the rating indicated on the plate situated inside the hood. If provided with a plug connect the hood to a socket in compliance with current regulations and positioned in an accessible area, after installation. If it not fitted with a plug (direct mains connection) or if the plug is not located in an accessible area, after installation, apply a double pole switch in accordance with standards which assures the complete disconnection of the mains under conditions relating to over-current category III in accordance with installation instructions.

 **Warning!** Before re-connecting the hood circuit to the mains supply and checking the efficient function, always check that the mains cable is correctly assembled.

The hood is provided with a special power cable ; if the cable is damaged, request a new one from Technical Service. The minimum distance between the supporting surface for the cooking equipment on the hob and the lowest part of the range hood must be not less than 50cm from electric cookers and 65cm from gas or mixed cookers. If the instructions for installation for the gas hob specify a greater distance, this must be adhered to.

4. MAINTENANCE

ATTENTION! Before performing any maintenance operation, isolate the hood from the electrical supply by switching off at the connector and removing the connector fuse. Or if the appliance has been connected through a plug and socket, then the plug must be removed from the socket. The cooker hood should be cleaned regularly (at least with the same frequency with which you carry out maintenance of the fat filters) internally and externally. Clean using the cloth dampened with neutral liquid detergent. Do not use abrasive products. **DO NOT USE ALCOHOL!**

Warning! Failure to carry out the basic cleaning recommendations of the cooker hood and replacement of the filters may cause fire risks.

Therefore, we recommend observing these instructions.

The manufacturer declines all responsibility for any damage to the motor or any fire damage linked to inappropriate maintenance or failure to observe the above safety recommendations.

The grease filter must be cleaned once a month using non aggressive detergents, either by hand or in the dishwasher, which must be set to a low temperature and a short cycle. When washed in a dishwasher, the grease filter may discolour slightly, but this does not affect its filtering capacity.

The saturation of the charcoal filter occurs after more or less prolonged use, depending on the type of cooking and the regularity of cleaning of the grease filter. In any case it is necessary to replace the cartridge at least every four months. The charcoal filter may NOT be washed or regenerated.

5. CONTROLS

The hood is fitted with a control panel with aspiration speed selection control and a light switch to control cooking area lights.

1. ON/OFF lighting

2. OFF motors

3. - 4. - 5. Minimum suction power (3.), medium (4.), maximum (5.).

Use the high suction speed in cases of concentrated kitchen vapours. It is recommended that the cooker hood suction is switched on for 5 minutes prior to cooking and to leave in operation during cooking and for another 15 minutes approximately after terminating cooking.

6. LIGHTING

Disconnect the hood from the electricity.

Warning! Prior to touching the light bulbs ensure they are cooled down.

Replace the damaged lamp.

Use E14 3W max LED lamps only. For more details, check enclosed leaflet "ILCOS D" (alfanumeric position "1d").
