Sensor Instructions

1. On/Off

To switch the light on / off: One single brief touch.

2. To dim 20% 100%

To dim the brightness: When the light is on, touch and hold on the sensor, the brightness will be change automatically, if it reaches its max brightness (100%) or minimum (20%) it will blink. Where you leave the brightness level this will be saved and will always be that level unless changed again as the mirror saves the last setting.

3. Adjustable colour temperature 2700K 6500K

To change the light colour: When the light is off, touch and hold the sensor, then wait for a short while, the light will turn on and the colour will gradually change through a cycle from the coolest (6500K) to the warmest (2700K). The mirror is designed to remember your last setting.
