About Salamander Pumps

Salamander Pumps, one of the UK's leading manufacturers of shower pumps have spent over 4 years developing this innovative, compact and competitively priced solution for low mains water pressure and flow, called **HomeBoost**.

HomeBoost is an intelligent pump; it recognises when pressure and flow is low and automatically **boosts** the performance of the incoming mains water.

Salamander pumps are manufactured in the UK from top quality components, the majority of which are sourced from the EU.

Each component is extensively tested for long life and every pump is subject to strict quality controls before it leaves our factory in Sunderland.

Salamander Pumps have developed a highly professional and responsive service support team for its customers. Whether that support is for pre-installation advice or advice on which pump best fits the customers needs, or to address any post installation issues that may occur, then our friendly and helpful staff are on hand via Pumpwise.

All Salamander pumps come with comprehensive installation guidelines to support a trouble free installation.

When installed in accordance with those guidelines we are confident that you will enjoy trouble free ownership of your Salamander pump for many years to come.

Why fit HomeBoost?

If you are experiencing poor water pressure or flow either directly or indirectly via your combi boiler or mains pressure fed heating system, then **HomeBoost** is the perfect low cost, compact, water fitting regulations compliant, solution to help **'Boost'** your pressure.

HomeBoost Features

Problems

- Getting efficient mains water flow and pressure into your property?
- Slow bath fill?
- A poorly performing shower?
- A drip rather than flow through your kitchen or bath tap?
- Poor combi boiler performance?

The Solution

- Install the **HomeBoost** pump now.

The Outcome

- **HomeBoost** operates at 1.6 bar closed head; it will **boost** pressure typically by 1.5 bar while regulating flow to 12 ltrs/min ensuring compliance with water fitting regulations.
- As a result, you can enjoy full flowing showers, speedy bath fill, and improved effectiveness of your combi boiler.

It's very quiet too!

- Operating at 46dB*, it is significantly quieter than electric boiling kettles.**

Where to fit HomeBoost?

It should be installed directly onto the incoming mains using 3/4" BSP fittings either after the stop tap or before the boiler appliance.

* Tested for sound at a distance of 1m from the unit at the Acoustic Calibration Laboratory at Salford University. A-weighted emission sound pressure level at 1m, Lp.

** Sampled dB ratings from 4 leading electric kettle brands.
