

Shower Head KitPlumbing Systems and Water Pressure

All products are suitable for all UK Water Authority supply pressures. If the product is installed at low pressure (tank fed) then the minimum height from the outlet of the shower head to the underside of the cold tank should be 1.8 metres to ensure adequate performance.

This product should be installed in accordance with the current Water Regulations. Any claims that may arise will be dealt with on the basis that isolating valves are fitted.

Water Pressure:

We recommend a minimum water pressure of 0.5 Bar and a maximum of 5 Bar to ensure efficient operation of your product.

Cleaning/General Care

Chrome and Gold plated finishes should be cleaned with warm water and a soft cloth, rinsed and then immediately buffed with a dry soft cloth. Under no circumstances must any aggressive or abrasive cleaning agents be used. The use of any abrasive agents or materials will invalidate the guarantee.

Installation Guide

1. Hold the slider rail in the required position. Move the rail away from the fixing brackets and mark the drill hole positions through the brackets onto the wall.
2. Drill holes to a depth of 45mm in to the wall.
3. Push the wall plugs into the holes.
4. Screw the brackets onto the wall, with the screws inserted into the wall plugs.
5. Push the assembled slider rail's top and bottom pieces over the brackets.
6. Secure the slider rail assembly into place by inserting and tightening the grub screws at the top and bottom.
7. Connect the end of the shower hose to the outlet of the shower valve, and the other end of the hose to the hand shower. Place the hand shower in the holder.
