

# Brushed Nickel 15mm Angled TRV and Lockshield Set

Product Code: 129019

A thermostatic angled radiator valve and matching lockshield set for controlling the heat output of an individual radiator. The set uses robust brass construction, a liquid-filled sensor and a brushed nickel finish, with an angled layout suited to common side-entry radiator installations.

## Product Specifications

| Specification               | Details                                              |
|-----------------------------|------------------------------------------------------|
| Brand                       | Towelrads                                            |
| Product type                | Thermostatic radiator valve (TRV) and lockshield set |

| Connection size             | 15 mm                                                |
| Inlet connection            | 15 mm compression                                    |
| Outlet connection           | 1/2" BSP                                             |
| Control type                | Thermostatic                                         |
| Lockshield included         | Yes                                                  |
| Sensor type                 | Liquid-filled                                        |
| Operating temperature range | 7-32°C                                               |
| Frost protection            | Yes                                                  |
| Material                    | Brass                                                |
| Finish                      | Brushed nickel                                       |
| Shape / style               | Round / modern                                       |
| Approx. dimensions          | 105 x 65 mm                                          |
| Manufacturer guarantee      | 2 years                                              |

## Key Features

- Thermostatic radiator valve with matching lockshield
- Angled valve configuration
- 15mm compression inlet connection
- 1/2-inch BSP outlet connection
- Liquid-filled thermostatic sensor
- 7-32°C operating temperature range
- Frost-protection function
- Robust brass construction
- Brushed nickel finish

## Installation Notes

Angled radiator valves are generally used where heating pipework rises from the floor and connects to radiator side inlets. Check the radiator connection position, pipe size and heating-system compatibility before installation.

**Reference:** Specifications cross-checked against Towelrads manufacturer literature and current UK retailer technical information for product 129019. Installation dimensions and system compatibility should be confirmed before fitting.
