

Wall Mounted Concealed / Exposed Manual Shower

Plumbing Systems and Water Pressure

All products are suitable for all UK Water Authority supply pressures. If the taps are installed at low pressure (tank fed) then the minimum height from the outlet of the nozzle to the underside of the cold tank should be 1.8 metres to ensure adequate performance.

These taps should be installed in accordance with the current Water Regulations. Any claims that may arise will be dealt with on the basis that isolating valves are fitted.

Water Pressure:

We recommend a minimum water pressure of 0.5 Bar and a maximum of 5 Bar to ensure efficient operation of your product.

Cleaning/General Care

Chrome and Gold plated finishes should be cleaned with warm water and a soft cloth, rinsed and then immediately buffed with a dry soft cloth. Under no circumstances must any aggressive or abrasive cleaning agents be used. The use of any abrasive agents or materials will invalidate the guarantee.

Installation Guide

Follow these instructions before fitting the tap detailed in this guide.

Prior to installation, please check that your plumbing system is adequate and that all pipes have been sufficiently flushed through.

1. Use the hexagonal wrench to take off the handle.
2. Align the two water inlet pipes to the two water supply feeds in the wall, then find the wall-fixing connector.
3. Attach the wall-fixing connector into place.
4. Attach the valve to the wall fixing connector. Connect the hot water inlet pipe (marked in red) to the hot water supply and the cold pipe to the cold supply inlet. Tighten the hex nut and wall cover.
5. Use the hexagonal wrench to lock the bolt so that the tap body is tight to the wall-fixing connector.
6. Insert the decorating plate and attach the handle.
